API-Referenz

Diese Seite listet jeden Endpunkt auf, der mit einem [Personal API Token](#) erreichbar ist — automatisch aus den Routendefinitionen des Backends generiert, sodass sie immer dem tatsächlich bereitgestellten Stand entspricht. Jede Anfrage muss beide erforderlichen Header enthalten:

```
Authorization: Bearer smv live ...
x-api-key: <dein API-Schlüssel>
```

Wie du ein Token erzeugst und welche Ratenlimits/Kontingente gelten, steht unter [API-Zugriff](#).

Antwortformate sind hier noch nicht dokumentiert — jeder Endpunkt unten zeigt die Form der Anfrage (falls vorhanden); die Form einer erfolgreichen Antwort ist noch nicht Teil dieser generierten Referenz. Eine [eigenständige PDF](#) dieser Seite ist ebenfalls verfügbar.
